AutoPilot Automatically Helps Aldrich Museum Save Thousands Annually

Aldrich Museum, a non-profit organization in a historic section of Connecticut, has been integral to the education and cultural development of its community since 1964 and relies heavily on public funding and philanthropy for its success and sustainability. Their popular learning center was developed for children and families in the community to expand their learnings about culture and art.

THE CHALLENGE

As a non-profit organization operating under tight restrictions, they were losing thousands a year with their third-party energy supply plan. This was putting unnecessary strain on the operational costs of their organization. Furthermore, they did not have the funding to support compensating a staff member for managing or optimizing their energy supplier choices.

THE SOLUTION

The customer was introduced to AutoPilot and selected our technology service to manage their energy bills for them, automatically and without hassle. Our service went to work researching the market to find a commercial energy supply plan that would realize savings* over time as compared to the standard utility. They enrolled in AutoPilot in October 2017. We soon after switched them to a 12-month rate plan at \$7.40 cents—much lower than their previous third-party supply rate of \$10.95 cents. But AutoPilot doesn't stop there. Now, after multiple renewal terms, we've continued to help this organization save money automatically and without hassle while they focus on the great work they do every day.
