intelliPTAC

IntelliPTAC also comes in a model that is based on the same principles as the full size HVAC models but varies slightly to be compatible with PTAC HVAC systems. The device tracks unutilized energy within the heat exchanger or evaporative coils and expels it through the fan before cycling down. This seemingly small modification to each cycle can result in significant energy and cost savings.

- Guaranteed to Reduce Energy Costs 10% - 15%
- Reduces Compressor Cycles by 15%
- Prevents Wear and Tear
- Extends Life of Equipment
- 12-18 Month ROI
- Reduced CO2 Emissions—Go Green!

The energy consumption from our PTAC units is significant, especially during peak guest hours. The savings from the IntelliHVAC PTAC technology has really helped our bottom line.

—AJITH, HOLIDAY INN

Our hotel has over 100 rooms and we struggle with energy concerns. The reduction in energy from the PTAC's is great. Very impressed.

—RAM, SLEEP INN
